Code Review- Parser

Code reviewers: Dora Moraru and Stefania Mihalca

Implementation authors: Ioana Moldovan and Mustea Madalina

935/1

In terms of the structure of the code, the implementation respects principles of Object-Oriented Programming: there are classes implemented for each necessary entity; most methods respect the single-responsibility principle, as the work is split in small units.

The clarity of the implementation could be improved by including specification for the more complex methods. Also, the longer methods would be clearer if descriptive comments would be included to describe the steps that they take. Some variables have suggestive names, others could have more appropriate naming.

In terms of content, the application implements all the required functionalities.
